Improving Literacy in America Frederick J. Morrison,Heather J. Bachman,Carol McDonald Connor,2008-10-01 divAn

alarmingly high number of American students continue to lack proficiency in reading, math, and science. The various attempts to address this problem have all too often resulted in “silver bullet” solutions such as reducing class size or implementing voucher programs. But as the authors of this critically important book show, improving literacy also requires an understanding of complex and interrelated social issues that shape a child’s learning. More than twenty years of research demonstrate that literacy success is determined by a combination of sociocultural forces including parenting, preschool, classroom instruction, and other factors that have a direct impact on a child’s development. Here, Frederick J. Morrison, Heather J. Bachman, and Carol McDonald Connor present the most up-to-date research on the diverse factors that relate to a child’s literacy development from preschool through early elementary school. Urging greater emphasis on the immediate sources of influence on children, the authors warn against simple, single solutions that ignore other pivotal aspects of the problem. In a concluding chapter, the authors propose seven specific recommendations for improving literacy—recommendations that can make a real difference in American education./DIV

R Programming and Its Applications in Financial Mathematics Shuichi Ohsaki,Jori Ruppert-Felsot,Daisuke Yoshikawa,2018-01-31 This book provides an introduction to R programming and a summary of financial mathematics. It is not always easy for graduate students to grasp an overview of the theory of finance in an abstract form. For newcomers to the finance industry, it is not always obvious how to apply the abstract theory to the real financial data they encounter. Introducing finance theory alongside numerical applications makes it easier to grasp the subject. Popular programming languages like C++, which are used in many financial applications are meant for general-purpose requirements. They are good for implementing large-scale distributed systems for simultaneously valuing many financial contracts, but they are not as suitable for small-scale ad-hoc analysis or exploration of financial data. The R programming language overcomes this problem. R can be used for numerical applications including statistical analysis, time series analysis, numerical methods for pricing financial contracts, etc. This book provides an overview of financial mathematics with numerous examples numerically illustrated using the R programming language.

Common Sense on Weapons of Mass Destruction Thomas Graham, Jr., 2011-10-01 In our post-9/11 world of shoe bombers and cyberterrorism, a crude nuclear device no larger than a baseball could devastate a major city. As we live in fear of attacks of unknown proportion, why do people remain confused and complacent in the face of potential disaster? Ambassador Thomas Graham Jr. believes that a tide of misinformation has led to the public's lack of understanding of the vital issues. Here, in a straightforward and comprehensible style, Graham concisely provides the background necessary to understand the news and opinions surrounding WMDs. *Common Sense on Weapons of Mass Destruction* presents accessible, up-to-date facts on: -nuclear proliferation and nuclear terrorism -chemical and biological weapons -land mines and small arms -missile defense and WMDs in outer space -WMDs in the Middle East and Asia

International Commercial Arbitration and the Arbitrator's Contract Emilia Onyema, 2010-04-05 This book examines the formation, nature and effect of the arbitrators' contract, addressing topics such as the appointment, challenge, removal and duties and rights of arbitrators, disputing parties and arbitration institutions. The arguments made in the book are based on a semi-autonomous theory of the juridical nature of international arbitration and a contractual theory of the legal nature of these relationships. From these premises, the book analyses the formation of the arbitrator's contract in both ad hoc and institutional references. It also examines the institution's contract with the disputing parties and its effect on the arbitrator's contract under institutional references. The book draws from national arbitration laws and institutional rules in various jurisdictions to give a global view of the issues examined in it. The arbitrator's contract is analysed from a global perspective of arbitral law and practice with insights from various jurisdictions in Africa, Asia, Europe, North and South America. The primary focus of the book is an analysis of the formation of the arbitrator's contract and the terms of this contract and the institution's contract. The primary question of the consequences (if any) of the breaches of the terms of these contracts and its impact on the exclusion or limitation of liability of arbitrators and institutions is also analysed with the conclusion that since these transactions are contractual and the terms can be categorised as in any normal contract, then normal contractual remedies can be applied to the breaches of these terms. *International Commercial Arbitration and the Arbitrator's Contract* will be of great value to arbitration practitioners and researchers in arbitration. It will also be very useful to students of arbitration on the topics of arbitrators and arbitration institution.
