Modern Classic Cocktails Robert Simonson,2022-10-04 60+ recipes for today's modern classics with entertaining backstories from the cocktail revival of the past thirty years, by a two-time James Beard Award nominee and New York Times cocktail and spirits writer. "No proper drinking library is complete without Robert Simonson's volumes, and Modern Classic Cocktails is one of the best yet." —Adam Platt, New York magazine restaurant critic and author of *The Book of Eating* One of the greatest dividends of the revival in cocktail culture that began in the 1990s has been the relentless innovation. More new cocktails—and good ones—have been invented in the past thirty years than during any period since the first golden age of cocktails, which lasted from roughly the 1870s until the arrival of Prohibition in 1920 and included the birth of the Martini, Manhattan, Daiquiri, and Tom Collins. Just as that first bar-world zenith produced a half-century of classic recipes before Prohibition, the eruption of talent over the past three decades has handily delivered its share of drinks that have found favor with arbiters on both sides of the bar. Among them are the Espresso Martini, White Negroni, Death Flip, Old Cuban, Paper Plane, Siesta, and many more, all included here along with each drink's recipe origin story. What elevates a modern cocktail into the echelon of a modern classic? A host of reasons, all delineated by Simonson in these pages. But, above all, a modern classic cocktail must be popular. People have to order it, not just during its initial heyday, but for years afterward. Tommy's Margarita, invented in the 1990s, is still beloved, and the Porn Star Martini is the most popular cocktail in the United Kingdom, twenty years after its creation. This book includes more than sixty easy-to-make drinks that all earned their stripes as modern classics years ago. Sprinkled among them are also a handful of critics' choices, potential classics that have the goods to become popular go-to cocktails in the future.

The Great Encyclopedia of Nineteenth-Century Major League Baseball David Nemec,2006-06-04 The authoritative compendium of facts, statistics, photographs, and analysis that defines baseball in its formative first decades This comprehensive reference work covers the early years of major league baseball from the first game—May 4, 1871, a 2-0

victory for the Fort Wayne Kekiongas over the visiting Cleveland Forest City team—through the 1900 season. Baseball historian David Nemec presents complete team rosters and detailed player, manager, and umpire information, with a wealth of statistics to warm a fan’s heart. Sidebars cover a variety of topics, from oddities—the team that had the best record but finished second—to analyses of why Cleveland didn’t win any pennants in the 1890s. Additional benefits include dozens of rare illustrations and narrative accounts of each year’s pennant race. Nemec also carefully charts the rule changes from year to year as the game developed by fits and starts to formulate the modern rules. The result is an essential work of reference and at the same time a treasury of baseball history. This new edition adds much material unearthed since the first edition, fills gaps, and corrects errors, while presenting a number of new stories and fascinating details. David Nemec began the lifetime labor that helped produced this work in 1954 and admits it may never end, as there always will be some obscure player whose birth date has not yet been found. Until perfection is achieved, this work offers state-of-the-art accuracy and detail beyond that supplied by even modern baseball encyclopedias. As Casey Stengel, who was born during this era, was wont to say, “you could look it up.” Now you can.

*Freedom Farmers* Monica M. White,2018-11-06 In May 1967, internationally renowned activist Fannie Lou Hamer purchased forty acres of land in the Mississippi Delta, launching the Freedom Farms Cooperative (FFC). A community-based rural and economic development project, FFC would grow to over 600 acres, offering a means for local sharecroppers, tenant farmers, and domestic workers to pursue community wellness, self-reliance, and political resistance. Life on the cooperative farm presented an alternative to the second wave of northern migration by African Americans--an opportunity to stay in the South, live off the land, and create a healthy community based upon building an alternative food system as a cooperative and collective effort. *Freedom Farmers* expands the historical narrative of the black freedom struggle to embrace the work, roles, and contributions of southern Black farmers and the organizations they formed. Whereas existing scholarship generally views agriculture as a site of oppression and exploitation of black people, this book reveals agriculture as a site of resistance and provides a historical foundation that adds meaning and context to current conversations around the resurgence of food justice/sovereignty movements in urban spaces like Detroit, Chicago, Milwaukee, New York City, and New Orleans.

Bridge Maintenance, Safety, Management, Life-Cycle Sustainability and Innovations Hiroshi Yokota,Dan M. Frangopol,2021-04-20 *Bridge Maintenance, Safety, Management, Life-Cycle Sustainability and Innovations* contains lectures and papers presented at the Tenth International Conference on Bridge Maintenance, Safety and Management (IABMAS

2020), held in Sapporo, Hokkaido, Japan, April 11-15, 2021. This volume consists of a book of extended abstracts and a USB card containing the full papers of 571 contributions presented at IABMAS 2020, including the T.Y. Lin Lecture, 9 Keynote Lectures, and 561 technical papers from 40 countries. The contributions presented at IABMAS 2020 deal with the state of the art as well as emerging concepts and innovative applications related to the main aspects of maintenance, safety, management, life-cycle sustainability and technological innovations of bridges. Major topics include: advanced bridge design, construction and maintenance approaches, safety, reliability and risk evaluation, life-cycle management, life-cycle sustainability, standardization, analytical models, bridge management systems, service life prediction, maintenance and management strategies, structural health monitoring, non-destructive testing and field testing, safety, resilience, robustness and redundancy, durability enhancement, repair and rehabilitation, fatigue and corrosion, extreme loads, and application of information and computer technology and artificial intelligence for bridges, among others. This volume provides both an up-to-date overview of the field of bridge engineering and significant contributions to the process of making more rational decisions on maintenance, safety, management, life-cycle sustainability and technological innovations of bridges for the purpose of enhancing the welfare of society. The Editors hope that these Proceedings will serve as a valuable reference to all concerned with bridge structure and infrastructure systems, including engineers, researchers, academics and students from all areas of bridge engineering.

*Educating for the Knowledge Economy?* Hugh Lauder, Michael Young, Harry Daniels, Maria Balarin, John Lowe, 2012-01-06  
The promise, embraced by governments around the world, is that the knowledge economy will provide knowledge workers with a degree of autonomy and permission to think which enables them to be creative and to attract high incomes. What credence should we give to this promise? The current economic crisis is provoking a reappraisal of both economic and educational policy. Policy makers and educationists across the world see education as central to economic competitiveness. However, this book asks fundamental questions about the relationship between the economy and education since, in contrast to policy makers' rhetoric, the relationship between the two sectors is not straightforward. An unorthodox account of the knowledge economy and economic globalisation suggests that autonomy in the workplace and permission to think will be only given to the elite. In this view many aspirant well-educated middle-class young workers are doomed to disappointment. In this book, leading scholars from the US, the UK, Australia and New Zealand discuss these issues and interrogate the assumptions and links between the different elements of education and how they might relate to the economy. Even if we assume that the official view of the knowledge economy is correct, are we educating young people to be autonomous, creative thinkers? Are current policies relating to knowledge, learning and assessment consistent with the kinds of workers and skills required for the knowledge economy? *Educating for the Knowledge Economy?* will appeal to academics, policy makers, teachers and students interested in the central role of education in the knowledge economy.

Directors of Central Intelligence as Leaders of the U.S. Intelligence Community, 1946-2005 Douglas F. Garthoff,2007

President Harry Truman created the job of director of central intelligence (DCI) in 1946 so that he and other senior administration officials could turn to one person for foreign intelligence briefings. The DCI was the head of the Central Intelligence Group until 1947, when he became the director of the newly created Central Intelligence Agency. This book profiles each DCI and explains how they performed in their community role, that of enhancing cooperation among the many parts of the nation's intelligence community and reporting foreign intelligence to the president. The book also discusses the evolving expectations that U.S. presidents through George W. Bush placed on their foreign intelligence chiefs. Although head of the CIA, the DCI was never a true national intelligence chief with control over the government's many arms that collect and analyze foreign intelligence. This limitation conformed to President Truman's wishes because he was wary of creating a powerful and all-knowing intelligence chief in a democratic society. After the terrorist attacks of September 11, 2001, Congress and President Bush decided to alter the position of DCI by creating a new director of national intelligence position with more oversight and coordination of the government's myriad programs. Thus this book ends with Porter Goss in 2005, the last DCI. Douglas Garthoff's book is a unique and important study of the nation's top intelligence official over a roughly fifty-year period. His work provides the detailed historical framework that is essential for all future studies of how the U.S. intelligence community has been and will be managed.

*Young Onset Dementia* Hilda Hayo, Alison Ward, Jacqueline Parkes, 2018-02-21 Providing key information and insight into the experiences of people living with a diagnosis of young onset dementia, this book will increase the knowledge and skills of health and social care professionals in the early recognition, diagnosis and support of young people with dementia and their families. The book explores the experiences of people living with a diagnosis of young onset dementia through detailed case studies, and gives learning points to implement in practice for the better provision of appropriate support and care. It

explains the need for adapting services which are often designed for older people, and how the complicated diagnostic process can lead to misdiagnosis among younger people. Key issues are considered, including at-risk groups, work and dealing with potential loss of employment, changes in personal and family relationships, readjusting life expectations and plans, and social isolation.

Theory of the Electron J. Keller, 2001-11-30 In the first century after its discovery, the electron has come to be a fundamental element in the analysis of physical aspects of nature. This book is devoted to the construction of a deductive theory of the electron, starting from first principles and using a simple mathematical tool, geometric analysis. Its purpose is to present a comprehensive theory of the electron to the point where a connection can be made with the main approaches to the study of the electron in physics. The introduction describes the methodology. Chapter 2 presents the concept of space-time-action relativity theory and in chapter 3 the mathematical structures describing action are analyzed. Chapters 4, 5, and 6 deal with the theory of the electron in a series of aspects where the geometrical analysis is more relevant. Finally in chapter 7 the form of geometrical analysis used in the book is presented to elucidate the broad range of topics which are covered and the range of mathematical structures which are implicitly or explicitly included. The book is directed to two different audiences of graduate students and research scientists: primarily to theoretical physicists in the field of electron physics as well as those in the more general field of quantum mechanics, elementary particle physics, and general relativity; secondly, to mathematicians in the field of geometric analysis.
